GHARDA FOUNDATION'S GHARDA INSTITUTE OF TECHNOLOGY GIT Experiment No. 2 Date: Title- Assignment on State space formulation and PEAS representation for various AI applications. PEAS Document-* PEAS stands for Porformance measure, Environment Actuators, and Sensors, which is a model used to describe intelligent systems. · AI Application - Smoot Invigilator Performance measure -The smort invigilator's goal is to ensure integrity of exams and enforce the rules 2) Environment-The environment includes the exam room, the students and any other relevant variables. 3) Actuators -The smart invigilator can perform the actions to achieve its good, such as monitoring students detecting cheating and alerting authorities. 4) Sensors -The sensors are the inputs the smart invigilator receives from the environment, such as audio, visual, and other data sources, which it uses to make decisions and take actions.
