Evaluation Sheet

Class: TE-Computer Engineering   Sem: V

Subject: **Artificial Intelligence Lab(CSL604)**

Experiment No: 3

Title of Experiment: Study the implementation of Breadth First Search Algorithm.

Name of Student: Niraj Nitin Surve   Roll No: 68

Date of Performance:

Sr. No.	Evaluation Criteria	Max Marks	Marks Obtained
1	Practical Performance	8	
2	Oral	5	
3	Timely Submission	2	
	Total	15	

Signature of Subject Teacher

(Prof. M. A. Khandke)

Program Code –

```python
n = int(input("Enter the number of nodes in graph: "))
graph = {}
for i in range(n):
    key = input("Enter key for node: ")
    value = list(map(str, input("Enter values separated by space: ").split()))
    graph[key] = value
print("Graph: ", graph)
visited = []
queue = []
visited.append('0')
queue.append('0')
while queue:
    s = queue.pop(0)
    print (s, end = " ")
    for frontier in graph[s]:
        if frontier not in visited:
            visited.append(frontier)
            queue.append(frontier)
```

Output –

```
PS N:\Academics\Study Material\Degree (B.E.) in Computer Engineering\6th Sem\Artificial Intelligence (AI)\Practicals> & "C:/Program Files/Python311/p
